

# CASE STUDY

# JUMP SHIP BREWING

## ABOUT

Atkore supplied the Unistrut UT3 Unitray, P1000T and UGM10 Hinge Mounts in order to enhance the overall functionality and aesthetics for Jump Ship Brewings' bar and brewing areas in Port Lincoln, South Australia.

### NAME OF PROJECT

Jump Ship Brewing

### CLIENT

Hankins Electrical/Jump Ship Brewing

### DETAILS

- COMMERCIAL SECTOR
- PRODUCTS: UNISTRUT UT3 CABLE TRAY, P1000T UNISTRUT CHANNEL AND UGM HINGE MOUNTS
- JUNE 2024
- PORT LINCOLN

## DESCRIPTION

Jump Ship Brewing, a prominent craft brewery located in Port Lincoln, South Australia, undertook a significant project to enhance both functionality and aesthetics of its bar and brewing areas.

Their mission statement, "Our mission is to brew high quality craft beers which celebrate our pristine environment and connection with our community."

Hankins Electrical comprehensive approach involved the installation of the Unistrut UT3 Unitray in both the bar and brewing areas, as well as the use of the P1000T Unistrut channel for structural support. Additionally, the UGM10 Hinge Mounts were strategically utilised to support the insulated pipework in the brewing area, showcasing the precision and versatility of their installation.

## SOLUTION

One of the challenges for this installation was that being an older building, the cabling and pipework through the bar and brewing area are completely exposed, which presented a challenge of maintaining a visually appealing and safe environment.

To address this, the UT3 Unistrut effectively organises and conceals cabling and pipework, ensuring easy access for maintenance and improves safety by reducing the risk of trip hazards or accidental damages. For further integration, the UT3 Unistrut was painted white to match the wall and roof truss in the bar area, preserving the aesthetic integrity of the space. The UT3 Unistrut was left unpainted near the fermentation tanks, recognising that the brewing area benefits from an industrial appearance that emphasises functionality and the craft of brewing.

The fact that Atkore Unistrut was used allowed Hankins Electrical to achieve balance between aesthetics and functionality.

*The Unistrut UT3 Unistrut was an ideal solution for the cable pipe supports at Jump Ship Brewing. Visually it contributes to the industrial feel of the bar area and brewing area.*
